# Project Overview

The present document provides insights on the development process of the course project for Information Systems (SINF - EIC0040) of the Integrated Masters in Informatics and Computing Engineering (MIEIC) at the Faculty of Engineering of the University of Porto (FEUP).

The project in question is based on a fundamental pillar: comfort for the customer. Thus, we are specifying an illustrative model of two companies, one which bottles and sells beverages and one other that sells bottles, and automating the business interaction between them with an integration with PRIMAVERA's ERP software.

The aim of this project is to develop an interface that allows the companies to define a set of reactive processes that are integrated with the *Jasmin* platform: that is, processes that are executed *in response* to specific user-driven events, such as an invoice being generated or new stock being registered, and admit the concept of continuations, which define a sequence of trigger-process-stop steps within a single automated process.

To achieve this goal our work is divided in two phases. In this first, planning phase, we have modeled a set of business processes between the two aforementioned companies, and have identified, developed and mocked up the core views and functionalities needed to implement our product.

In this project we will use *Jasmin* to deal with all the data and processes surrounding transactions, inventory and information about each product. This information will be accessible after establishing a communication layer between *Jasmin* and the backend of our project.

For the validation of the project, as said above, we will use two fictitious companies both utilizing *Jasmin*. These companies, *KSede* and *BottleFlip* interact in two key ways, as described by the BPMN diagrams present in section 4 of this report. *KSede* buys bottles from *BottleFlip* for the production of their products, various bottled beverages, and *BottleFlip* rents their factory space from *KSede*, who owns the building where they both operate.

# Features

## Process List View

- **Process visualization** - list of the processes established between the two selected companies represented on a table with their IDs, description and respective timestamp.
- **Add new process** - button that links to New Process View, which allows the user to create a new process.
- **Process details** - each ID links to their respective details.

## Process Creation / Editing View

- **Edit** - button that allows the user to edit a process.
- **Delete** - option to delete the process and return to Processes View.
- **Confirm** - option to confirm the new process and return to Processes View.

## Process Log List View

- **Process status** - table representing the status (success/pending/error) of process instances that are currently running or have recently run.

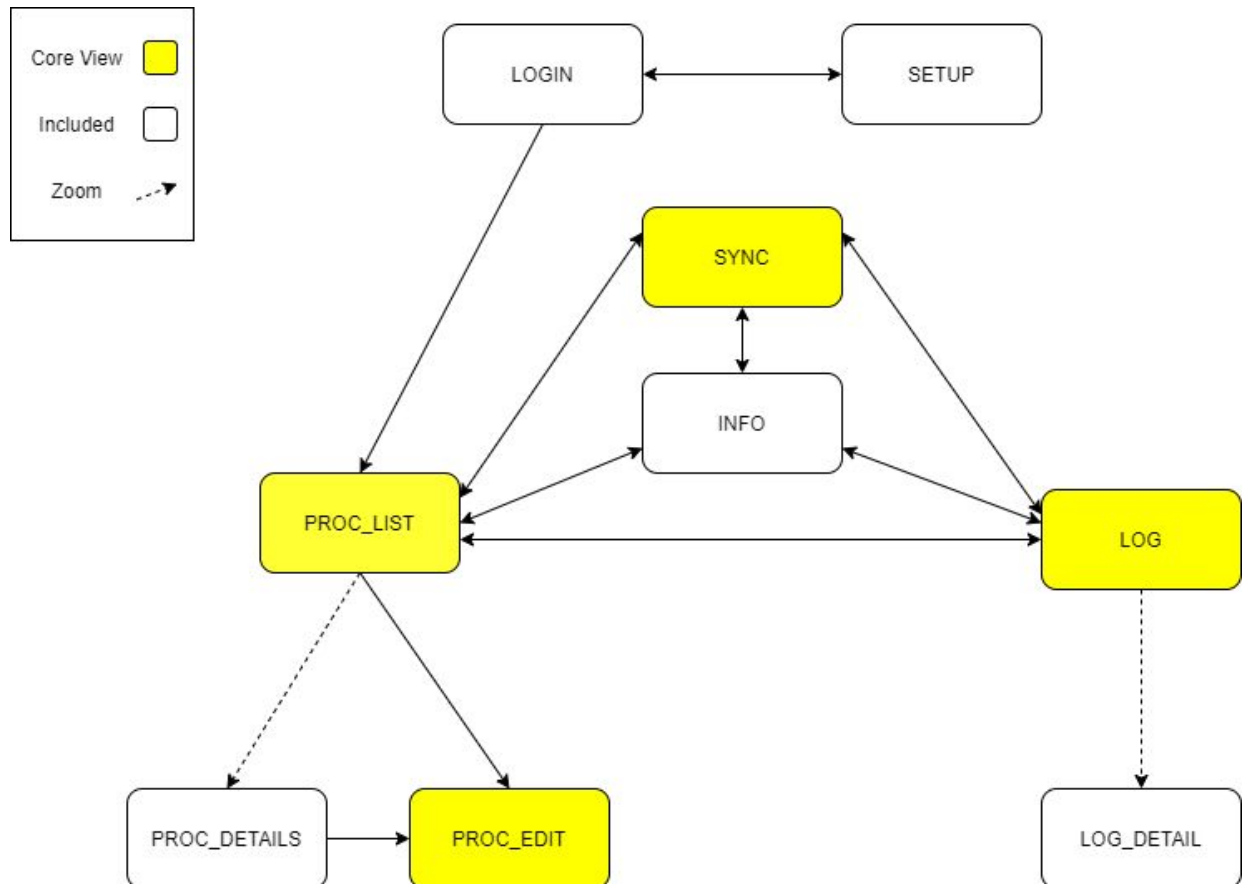

## Master Data Synchronization Management View

- **Company items** - tables representing the IDs and names of the items of each company.
- **Equivalent items** - table allowing the user to make a correspondence between the items IDs from both companies.

## Integration Setup View

- **Company Information** - allows the user to stand up a new instance of the platform by providing the name, tenant code, client ID and client secret of the companies, as well as their desired credentials for authentication.

# Information Architecture (Core views)

## Integration Setup (SETUP)

### User and Business Rules

View to be used for the setup of a new 2 company interaction by providing both companies information and the desired credentials

#### Inwards Paths / Trigger Words

- Create an account Button in **Sign-in** view

#### Outward Paths/Call to Action

- Create Account Button** in order to submit the information for the creation of a new account
- Already Have an account Button** to be redirected to the Sign-up page

Company 1

Company 2

Elements of the core

Company 1 Setup Information Form  
Company 2 Setup Information Form  
Credentials Form

## Process List (PROC\_LIST)

### User and Business Rules

View and execute the processes between the two selected companies.

#### Inwards Paths / Trigger Words

- Top navigation bar.
- Confirm button from **New Process** view.
- Delete button from **New Process** view.

#### Outward Paths/Call to Action

- Add New Process button links to **New Process** view.
- Process IDs links to their details and to the possibility of deleting or editing them.

Processes

Process ID	Process Name	Type
P-001	Get Company Key	Get New (0001) (0001) (0001)
P-002	Get Sales Invoice	Get New (0001) (0001) (0001)
P-003	Get Purchase Invoice	Get New (0001) (0001) (0001)
P-004	Get Company Return	Get New (0001) (0001) (0001)
P-005	Get Company Key	Get New (0001) (0001) (0001)
P-006	Get Purchase Invoice	Get New (0001) (0001) (0001)
P-007	Get Sales Invoice	Get New (0001) (0001) (0001)
P-008	Get Company Key	Get New (0001) (0001) (0001)
P-009	Get Sales Invoice	Get New (0001) (0001) (0001)
P-010	Get Company Key	Get New (0001) (0001) (0001)
P-011	Get Company Return	Get New (0001) (0001) (0001)
P-012	Get Company Return	Get New (0001) (0001) (0001)

Elements of the core

Processes table  
Add New Process button.

# Process Creation / Editing (PROC\_EDIT)

## User and Business Rules

Create a process between the selected companies.

Edit an existing process.

### Inwards Paths / Trigger Words

- "Add New Process" button from **Processes** view.
- Process IDs from **Processes** view.

ID	Trigger	Action
01	Wait for purchase order	Generate call order
02	Wait for delivery note	Generate order receipt
03	Wait for order payment	Generate payment receipt

### Outward Paths/Call to Action

- Delete button links to **Processes** view.
- Confirm button goes to **Processes** view.
- Top navigation bar.

### Elements of the core

Company 1 and Company 2 selectors  
Delete process button  
Confirm process button.

Table representing the steps of the process  
Edit process button

# Process Log List (LOG)

## User and Business Rules

Check the status of the processes between both companies.

Check the status of the requests to Jasmin.

### Inwards Paths / Trigger Words

- Top navigation bar.

ID	Process	Status	Time
P001	Get Company Key	Pending	11 Nov 2020 10:00:00
P002	Get Sales Invoice	Success	11 Nov 2020 10:00:00
P003	Get Purchase Invoice	Success	11 Nov 2020 10:00:00
P004	Get Company Name	Success	11 Nov 2020 10:00:00
P005	Get Company Key	Success	11 Nov 2020 10:00:00
P006	Get Purchase Invoice	Success	11 Nov 2020 10:00:00
P007	Get Sales Invoice	Success	11 Nov 2020 10:00:00
P008	Get Company Key	Success	11 Nov 2020 10:00:00
P009	Get Sales Invoice	Success	11 Nov 2020 10:00:00
P010	Get Company Key	Success	11 Nov 2020 10:00:00

### Outward Paths/Call to Action

- Each process ID links to its details.
- Top navigation bar.

### Elements of the core

Logs table  
Process IDs (details)

# Master Data Synchronization Management (SYNC)

## User and Business Rules

Check common products present in both companies.

Add/Remove correspondences between the products present in both companies.

### Inwards Paths / Trigger Words

- Top navigation bar

### Outward Paths/Call to Action

- Add new entry in the correspondences table.
- Select Company 1 and Company 2.
- Top navigation bar.

The screenshot shows a web application interface for Master Data Synchronization Management (SYNC). At the top, there is a navigation bar with 'Settings', 'Processes', 'SYNC' (highlighted), and 'Logs'. Below the navigation bar, there are two dropdown menus for 'Company 1' and 'Company 2', both currently set to 'Beerwinger'. Below these are three tables: 'Company 1', 'Company 2', and 'Equivalence'. The 'Company 1' table has columns 'Product ID' and 'Name' with 8 rows of data. The 'Company 2' table has columns 'Product ID' and 'Name' with 2 rows of data. The 'Equivalence' table has columns 'Product ID 1' and 'Product ID 2' with 2 rows of data. At the bottom right of the 'Equivalence' table, there is a button labeled 'Add new entry'.

Product ID	Name
0-001	Stone 100L
0-002	Stone 200L
0-003	Stone 3L
0-004	Phantom 200L
0-005	Phantom 100L
0-006	Phantom 3L
0-007	Phantom 1L 10L
0-008	Phantom 1L

Product ID	Name
0070101	Beer-Walker 100L
0070102	Beer-Walker 200L

Product ID 1	Product ID 2
0-001	0070101
0-002	0070102

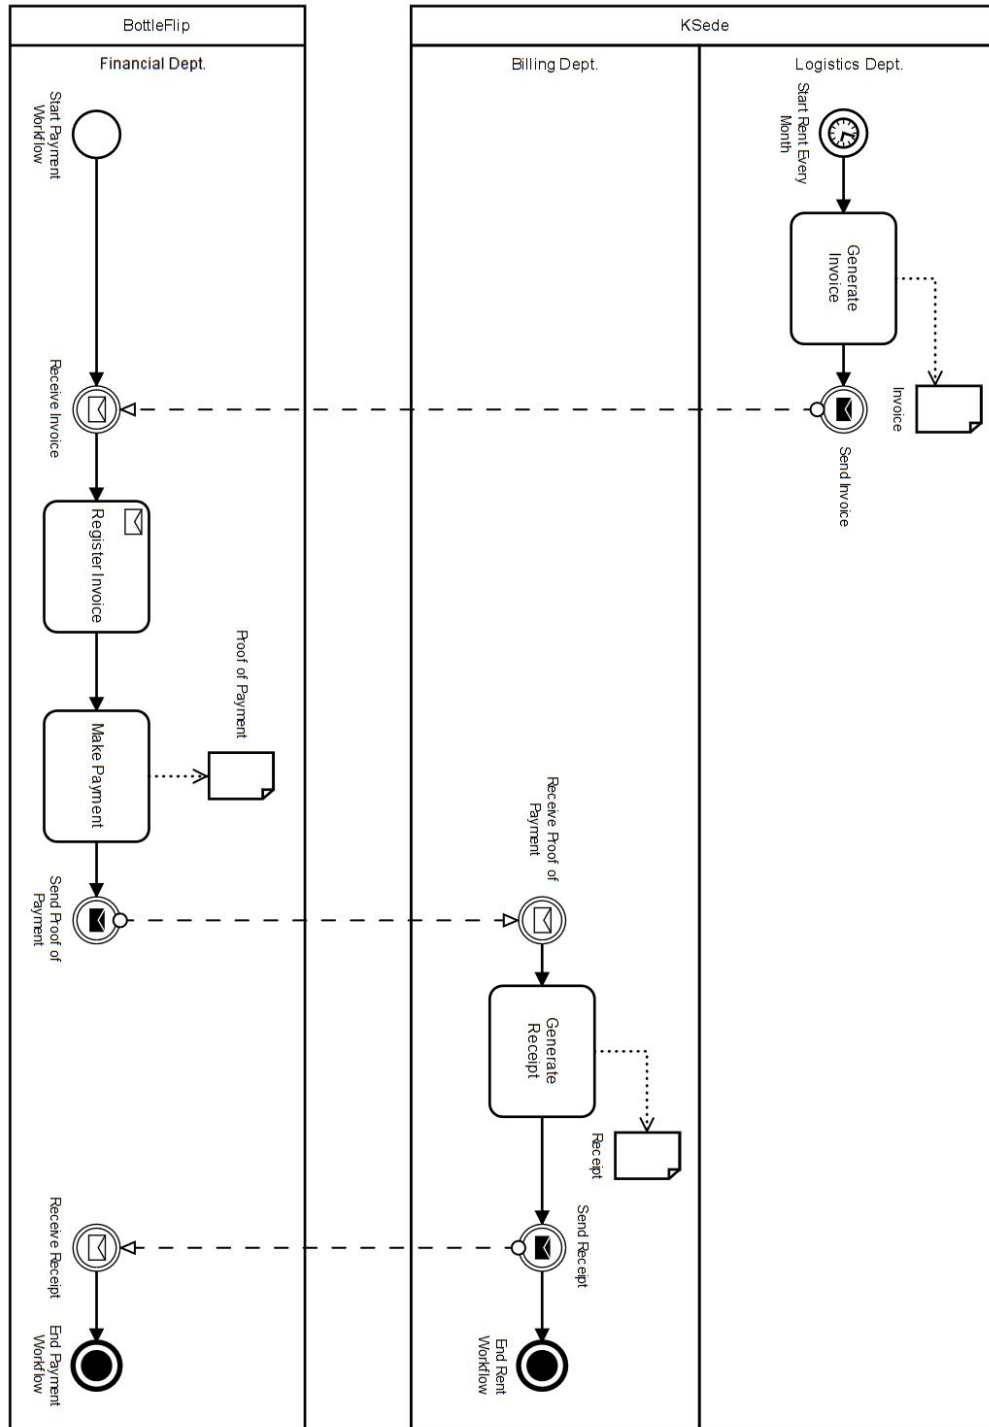

Add new entry
